

Kill-A-Watt™ meter

From P3 International, [www.p3international.com](http://www.p3international.com)

Specifications:	
Model	P4400
Operating Voltage:	115 VAC
Max Voltage:	125 VAC
Max Current:	15 A
Max Power:	1875 VA
Weight:	5 oz.
Dimensions:	5 1/8"H x 2 3/8"W x 1 5/8"D

max power

Plug the KW into any electrical outlet. Plug a device into the KW. Press the “Watt” button for a real-time display of the power to the device. Press this button again for the “VA” reading. Record both of these on your data sheet.

The maximum power the meter will read is 1875 VA. If you ask it for more power than that, it will beep at you! Please unplug it and use a lower-power device. To include devices on your list that might require more power than the KW will record, just look up the “power” on the label of the device! For example...a hair dryer might say “2300 Watts” on it...for the high heat setting.
