Energy Source Research Plan

Groups:

- Solar (PhotoVoltaic, Thermal)
- Wind
- Hydrogen
- Nuclear
- Geothermal
- BioMass

Questions:

- What is happening locally, regionally, nationally, and worldwide?
- What are the costs of this energy source vs. traditional (fossil fuel) energy sources?
- What path does the energy take from its original source to the form that it arrives at the consumer (trace it as we did with gasoline). In other words...roughly how does this particular energy source work?
- What environmental impact is made when using this energy source?
- Who benefits when people choose to use this energy source instead of traditional sources?
- How does or could this technology connect to your daily experiences now and in your future?
